

Support Requests

Overview

Support Requests is MyCE's built-in help-desk. Students, instructors, and high-school administrators open requests to the Concurrent Enrollment (CE) office; CE staff triage, assign, respond, and resolve them. Each request has a **type**, a **status**, an optional set of **file attachments**, and a running thread of **notes**. Email notifications keep everyone in the loop, and CE staff get filtering, export, bulk actions, and an at-a-glance dashboard.

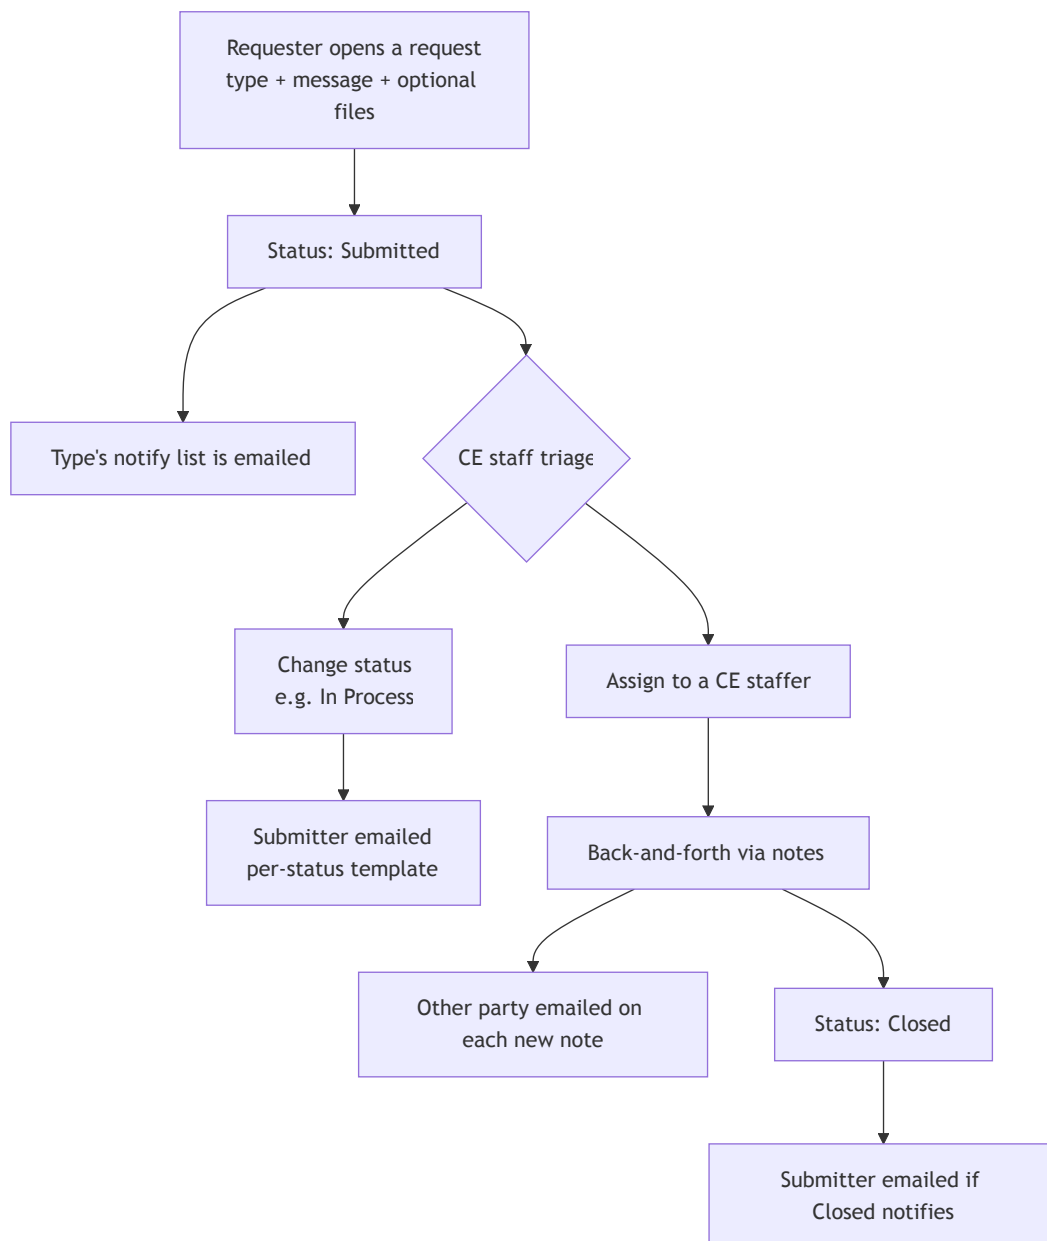

Nothing needs to be installed by the end user — Support Requests appears in the left sidebar for each role that is allowed to use it.

Who uses it

Role	Can do	Where
Student	Open requests, attach files, view their own requests, reply with notes	Student portal → Support Requests
Instructor	Open requests, attach files, view their own, reply	Instructor portal → Support Requests
High School Administrator	Open requests, view requests from their high school, reply	HS Admin portal → Support Requests
CE Staff	See all requests, assign, change status, reply (public or internal notes), bulk-update, export, view the summary dashboard, manage request types and settings	CE portal → Support Requests

Each requester only ever sees **their own** requests (high-school administrators see requests from people at their high school). CE staff see everything.

Request lifecycle

Statuses are **configurable** (see *Settings*). Out of the box they are **Submitted** → **Pending** → **Closed**; an administrator can rename them, add new ones, or change which statuses send an email.

Submitting a request

1. Open **Support Requests** in your portal and click **New Request**.
2. Pick a **Request Type** (only the types meant for your role are listed).
3. Enter your message.
4. Attach one or more files if needed. Some request types **require** at least one attachment — if so, you'll be asked to add one before you can submit.
5. Submit. You'll see your request in the list with status **Submitted**, and the CE office is notified automatically.

To continue a conversation, open the request and add a **note** (and optionally attach files). The other party is emailed when a note is added.

Managing requests (CE staff)

The CE **Support Requests** page is a searchable table with two tabs: **Requests** and **Summary**.

- **Filter** by **Status** and by **Assigned To** to narrow the list.
- **Export** the current view to **CSV** or **PDF**.
- **Open** any request in a pop-up to read the thread, assign it, change its status, and reply.
- **Notes** can be **Public** (visible to the requester and emailed to them) or **Internal** (CE-only — never shown or emailed to the requester).
- **Bulk actions:** select multiple rows, then **Update Status** or **Update Assigned To** to apply one change to all selected requests at once.

Bulk status/assignment changes update the selected requests directly and do **not** send the per-status emails (to avoid an email storm). Status changes made one request at a time from the request's page **do** send the configured email.

Summary dashboard

The **Summary** tab shows charts of open work — counts of requests **by status**, **by type**, and **by assignee** — so the CE office can see the queue at a glance.

Request types

A **Request Type** is a category a requester chooses when opening a request. CE staff manage types from the CE Support Requests area. Each type has:

Setting	Meaning
Name	What the requester sees in the dropdown (e.g. "Transcript question")
Applies to	Which audience can pick it: Students , Instructors , or High School Administrators
Default assignee	A CE staffer automatically assigned to new requests of this type
Notify	CE users and/or extra email addresses notified when a request of this type is submitted

Requires attachment

If on, the requester must attach at least one file to submit

Settings

CE administrators configure Support Requests under **Settings → Misc. → Support Ticket Settings**.

Setting	What it controls
Active	Active = emails send normally; Off = no emails; Debug = emails redirect to the test recipients only
Who can start requests	Which roles (students / instructors / high-school administrators) may open new requests. Roles that can't start requests won't see a New Request button
Statuses	The list of statuses (one per line; the first line is the status applied to new requests)
Per-status email	For each status: whether entering it emails the submitter, plus the subject and message template
Submission email	Subject + message sent to a type's notify list when a request is submitted
Note email	Subject + message sent to the other party when a note is added
Default recipients	Fallback addresses used when a request has no assignee
Sender address	The "from" address on Support Request emails

Email templates support shortcodes (e.g. `{{first_name}}`, `{{status}}`, `{{ticket_type}}`, `{{update}}`, `{{site_url}}`) that are filled in per request.

Emails are queued. Support Request emails are sent through the mail queue, not instantly in the browser — they go out as the queue is processed.

Reports

CE staff can download **Support Ticket Types – Export** (CSV) from the **Reports** area to get every request type with its audience, default assignee, notify list, and required-attachment flag.

Where to find it

Audience	Location
CE staff	CE portal → Support Requests (/ce/support_reqs/)
Students	Student portal → Support Requests (/student/support_requests/)
Instructors	Instructor portal → Support Requests (/instructor/support_requests/)
High-school admins	HS Admin portal → Support Requests (/highschool_admin/support_requests/)
Settings	CE portal → Settings → Misc. → Support Ticket Settings

Key Files

For administrators and developers — the feature ships as the `support_ticket` package (`Canusia/package-support_ticket`); see its `README.md` (install/wiring) and `docs/TECHNICAL.md` (architecture) for the full technical reference.

File / location	Purpose
<code>support_ticket</code> package	The app: models, portals, settings, signals, DRF API, report, dashboard
<code>webapp/cis/settings/menu.py</code> + <code>cis migration 0064</code>	Surfaces Support Requests in each role's sidebar nav
<code>webapp/cis/views/faculty.py</code> / <code>portals' views/</code>	Per-portal request pages

Troubleshooting

Issue	Cause	Resolution
A user doesn't see Support Requests in the sidebar	Their role isn't enabled, or the nav wasn't refreshed	Confirm the role is allowed under Who can start requests ; ensure the nav update ran for the site
New Request button is missing	The role is turned off under Who can start	Enable that role in Support Ticket Settings

requests

Can't submit — "attachment required"	The selected request type has Requires attachment on	Attach at least one file, or pick a type that doesn't require one
Requester can't see a CE reply in-portal	The note was marked Internal	Use a Public note for replies the requester should see
No emails are going out	Active is set to Off (or Debug), or the mail queue isn't being processed	Set Active to Active; confirm the mail queue is running
Emails go to the wrong place	Active is Debug (redirects to test recipients)	Switch Active to Active for production
A request type isn't offered to a user	The type's Applies to doesn't match the user's role	Set the type's Applies to to that audience
Bulk status change didn't email submitters	By design — bulk changes are silent	Change status from the individual request page to send the per-status email
